Mines and Mining Stocks

GEO. L. WALKER ON COPPER METAL

metal situation as follows:

"Copper is much more active and stronger this week. Lake is now 13% to 13% cents, and electrolytic is 13% cents MINING STOCK EXCHANGE. per pound. Domestic consumers have bought heavily, and what appeared to be foreign speculative buying has also been a factor. American manufacturers held off until the price of copper began to advance, and then generally covered their requirements for about two months ahead at the rising quotations. The two months' production of copper, in visible supplies recently, has nearly all been sold, and it is to be delivered in August and September 1. tember. Producing interests, as a rule, report themselves pretty well sold out up to date. This means that all their refined copes ready for market has been disposed of, and that they are now ready to begin selling for advance delivery the metal they are process of refining.

"Inquiry among consuming interests leads us to believe that the metal market may get dull again very soon. Brass people say there has been some improve-ment in business during the past five

COPPER STOCKS IN BOSTON AND NEW YORK

Following is the daily market comment of Paine, Webber & Co., Boston, together with the range of prices of copper stocks and other Boston listings in which the west is interested, as well as a similar report on New York curb transactions, by James A. Pollock & Co., and from which it is secured for use in this department

Boston, Aug. 12.-After a weak dragging market this morning stooks had a good rally at the close. The bull leaders were buying again and the selling was poor, mostly from weak holders and shorts. We expect higher prices tomorrow morning and would take profits for a turn. Adventure was very strong, selling at new high price of 9½. Fresh buying is com-ing in on this stock every day and we ex-pect shortly to see it sell at 12 to 15. Butte Coalition rallied very easily, closing at 28%, up 1% points. This stock is very scarce and from the character of the buying we expect a further rapid advance.

Stevens-Duryea Sixes

Some Reasons for Their Superiority. The superiority of the Stevens-Duryea lies in the perfect harmony of its various parts—not one feature here and there, but a blending of all that is best in auto-

mobile design and construction.

The famous Stevens-Duryea Unit Power The famous Stevens-Duryea Unit Power Plant, supported on three points, relieves the engine and bearings of the shock, twist and jar unavoidable on American roads, thus removing the most frequent cause of repair bills and meaning long life to vital part of car. The Unit Power Plant supported on Three Points also does away with heavy frame construction and numerous engine supports needed on cars without a Three Point support, thereby reducing tire trouble to a minimum.

The Six Cylinders insure suppleness. guiet running and absolute freedom from

quiet running and absolute freedom from vibration. The Six-Cylinder engine may vibration. The Six-Cylinder engine may be throttled down to four miles per hour and instantly accelerated to a speed fast enough to satisfy any speed enthusiast. Arrange for a demonstration.

TOM BOTTERILL AUTOMOBILE CO.

weeks; that they have bought copper to cover their requirements for some time ahead, in order to anticipate a possible further advance in the price. They think there will be a steady improvement in the brass business, but that it will come very slowly. Wire people say their plants are operating to about 50 per cent of their capacity. They look for some further improvement soon, but they do not see anything in sight to suggest a coming business boom.

business improvement meets no sudden setback, copper may possibly be selling at 15 cents by the first of the year."

Iron Blossom and Colorado Make a

Better Showing in Prices.

While the market as a whole behaves in a rather draggy and uninteresting fashion, a few of the stocks manage to make a move now and then and thus help to keep the business moving some. Colorado, which went off on the announcement of the 12c dividend, is picking up again and yesterday it moved up from \$4.35 to \$4.40. Iron Blossom is also gaining considerable strength and is about the liveliest stock in the list. Black for advance delivery the producing and have in not behaving as well as it ought to do. Unless something out of the ordinary happens, the prospects are that there will be little change from the way things are now moving until fall; then look out for lively market.

During the two regular and open board calls a total of 130,422 shares of stock, with a selling value of \$45,882.39, changed hands. Following is the list of final quotations and record of sales made during

ration recently formed to operate an exceptionally fine group of claims on Little Lost river, in Idaho, came down from camp yesterday more than ever pleased with the manner in which the ground is responding to development work. The tun-nel on the American claim in the group is now in a distance of 150 feet, with the is now in a distance of 150 feet, with the contractors making two feet a day. Face samples of the ore taken before he left the property have been assayed and found to carry 1.02 ounces gold and 174.6 ounces

"That kind of stuff is too good to throw over the dump," said Mr. Parker, "and sacks are being shipped to the mine in order that the ore may be saved and shipped to market. At the depth beneath the surface that the tunnel now gives we get but little copper. Water level is all of 500 feet deeper in the vein and it is evident that most of the copper has leached down. About fifty feet ahead of the present face of the tunnel there is a big blowout of ore, and when that point is reached in the tunnel I look for a remarkably fine body of pay ore, ore that will stand the wagon haul and rail-road transportation to the smelters and still leave a big profit. This ledge can be followed for a long distance through our property and it ranges from seven to twelve feet in width. If we had nothing that the bottom of the shaft was all in galena ore. I found that, instead of sixty sacks of ore on the dump, of the shaft was in quartzite, with a few little streaks of galena in it—a hungry-looking proposition, to be sure. I emplied a number of the sacks of shipping or and reached the conclusion that, if all the ore in the twenty sacks was closely sorted, it might be possible to get from them four sacks that would pay to ship. That is, in brief, what I found at a property represented to be 'a mine.'"

The experience of Engineer Jennings calls to mind an experience of a similar character that a well known mining man of this city, and formerly of Park City, had a few years ago. His story was told

JANUARY WHITE ROCK

Both sinking and cross-cutting, except on the upper level, have been temporarily suspended in the January White Rock because of a tremendous flow of water encountered a week ago in the cross-cut on the 370-foot level, says the Goldfield News. The water spurted in through the drill holes and it was deemed unwise to shoot holes and it was deemed unwise to shoot them for fear of a greater flow than the pump could handle. The pump is now be-ing kept running twenty-four hours a day and even at that it is unable to gain on the water. As soon as the mine is drained work will resumed in order to pick up a vein be

ruary claim. MISTAKE IN BECK TUNNEL

Through a mistake of the typewriter in the Knight offices at Provo, the monthly statement of the financial condition of the Beck Tunnel company was made to look pretty good. The statement made it read "cash on hai.", \$19,264.33," instead of "bills payable" in that amount. As soon as Secretary R. E. Allen saw the Salt Lake papers and the mistake that had been made, he hastened to correct it over

the telephone. The report covering the month of June showed that the company was in debt to the amount of \$16,005.34, so that the com-pany closed the month of July just \$3,258.99 more in debt than it was at the end of

Ore and Bullion.

Fairview Eagle

Another Case in Which Miner Loses Out by Misrepresenting Things.

E. P. Jennings, the mining engineer, has just returned from a trip to Galena, Nev., about six miles below Battle Mountain, where he went to make an examination of property, a property that was represented as being a lead mine. He returns

ANUARY WHITE ROCK

TAPS BIG FLOW OF WATER

going, he said;
"I am going south on a three or four days' trip to look at a claim owned by an old prospector that I have known for years. He says he has a three-inch streak of this ore in a fissure. If he had said there was six inches of the look. had said there was six inches of it I should not have believed him. He thinks it is going to amount to something, traced

out to the main ledge, and he wants me Afew days later the Parkite returned and was asked what the proposition amount-

ed to.
"It's the same old story." he said. "The ore streak, instead of being three inches thick, is only three inches long. The old fellow simply lied; but, to be charitable, I should say he has told the story of what he claimed to have so long, that he really believed it to be true."

The Florence Goldfield Mining company makes a fine showing in the foregoing table, the company and its leases disbursing almost five-sixths of the velvet. The Ore and bullion settlements in this city yesterday, as reported by McCornick & Co., amounted to \$60,000, as follows: Silver lead, gold and copper ores, \$10,000; base bullion, \$50,000. last statement issued by the company, un- M. S. Hanauer. ter paying \$315,000 in dividends and \$255,- Finest bathing in the world at Saltair

691.35 for construction of mill and water supply, the company still has on hand \$413,654.38. The company announces that "it is the intention to continue disburse-ments (of profits) to stockholders when-

ments (of profits) to stockholders whenever the reserve justifies."

The sensational performer of the Florence has been the Engineers' lease. The ore in this lease was found in ground which was believed to have been worked out by the preceding lessees, and the three engineers who formed the Enginers' Lease company had about concluded that was the correct dope until they struck the wigh-grade in a raise, forty feet above the 300 level, after all but exhausting their treasury fund. Since that date, June 17, they have done nothing but break rich ore, excepting to pause on two occasions to excepting to pause on two occasions to post a \$90,000 dividend.

WINGFIELD & NIXON CONTROL GOLDFIELD CON.

William H. Mackenzie, general manager of the Goldfield Consolidated, returned last night from an outing and business trip on the coast, and is now ready to buckle on the harness of a miner again, says the

sented as being a lead mine. He returns disgusted, however, because, he says, nothing was at all as it was pictured.

"I don't like to talk about such things, said Mr. Jennings, "but when property owners induce people to have their ground examined and promise that all they claim, and more, too, will be found, they should at least appreciate the fact that misrepresentation should be sparingly employed. It takes time and costs money to make trips and examine mining properties, and the sooner claim owners learn that it pays to be at least half hordest in telling what they have, the easter it will be for them to get money into or for their holdings.

"In this instance I went out to see property in which it was said that a shaft had been sunk some little distance in a ledge carrying a fine body of shipping lead ore; that sixty sacks of it were on the dump, and that the bottom of the shaft was all in galena ore. I found that, instead of sixty sacks of ore on the dump, there were only twenty; that the bottom of the shaft was in quartzite, with a few little streaks of galena in it—a hungryloor and reached the conclusion that, if all the ore in the twenty sacks was close-
